Who we are...

Renovite is a global technology company headquartered in Fremont, CA, USA specializing in EFT Switching products and custom payment solutions. Renovite's 21st century products help you revolutionize your payment system and thereby giving you a sustainable competitive advantage.

WHY US?

Experience & Expertise

Renovite is led by payment experts with significant experience in delivering leading edge solutions in the payments domain and Renovite's leadership team has differentiated itself by leading the technology wave in each domain they have served.

Excellence

Renovite has demonstrated an historical capability to identify emerging market needs left unsatisfied by legacy and "me too" suppliers. Renovite's core competency is the satisfaction of those leading edge requirements through the deployment of leading edge technology coupled with a client-focused, 21st Century delivery model.

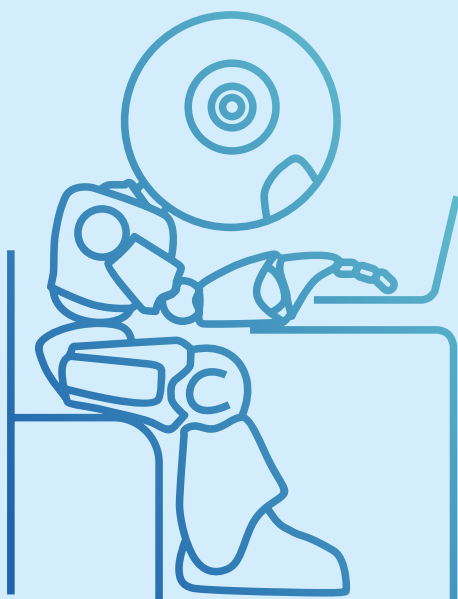

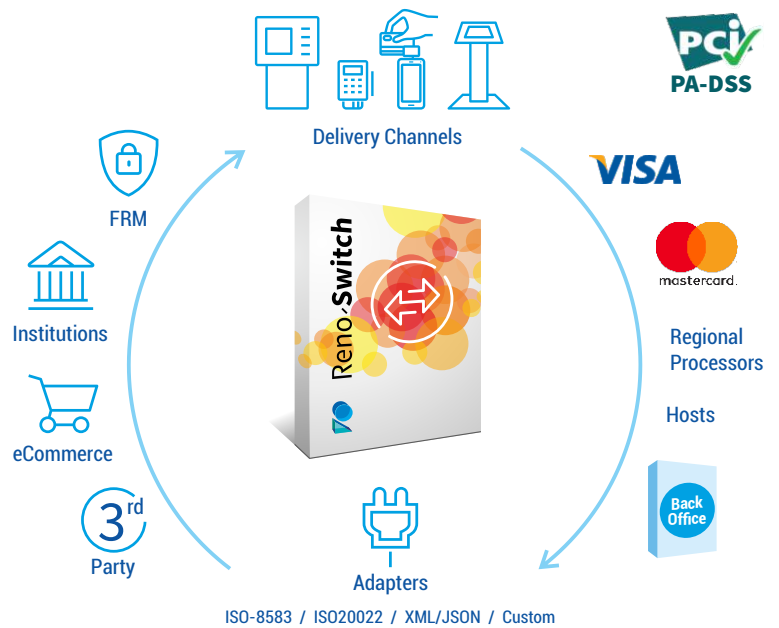

Efficiency

Renovite provides an optimal mix of onsite and offsite teams to efficiently deliver products and services.

Reno-Switch

Renovite payment processing system is the first transaction switch designed to meet the needs of the 21st Century payments industry.

Renovite's willingness to embrace modern approaches has by-passed the solutions built in the early 2000s based on 1990 design patterns. It has delivered a product solution that is capable of replacing legacy payment switches from the 1980s and 1990s as an integral component in a 21st Century life cycle based on Continuous Delivery or DevOps principles.

Reno-Test

Renovite lifecycle test Automation tool, that ensures structured design and organization of automation code into components

Reno-Test is a next generation Automation tool that revolutionizes testing around mainstream Payment products. It's an independent tool that can be leveraged across multiple Platforms, Domains & Technologies.

The tool addresses accurate end-to-end automation of Acquirer, Hosts, with inbuilt pre-certification test suites & can easily be used by the SME or business team, with limited coding knowledge.

Renovite's pedigree in complex systems integration has reinforced the company's opinion that technology is only half of the answer for any payments organization that wants to compete in the 21st Century marketplace. New entrants are frequently unburdened by legacy infrastructures and legacy processes. Companies need to deploy more agile technologies within agile life cycles in order to win and retain business in an ever changing landscape. Evolving an organization to utilize lean, agile life cycles is a complex program of change.

Renovite as a company, since inception has embraced agile management methodologies. Practicing these methods internally has built its capabilities in agile life cycle management. The company has combined this internal experience with its consultants' individual, extensive external experience of life cycle refresh to create a unique consulting practice. Renovite's specialist life cycle refresh consultants enable clients to maximise the return on their switch replacement investment by evolving their life cycle practices to embrace the Reno-Switch 21st Century solution.

Services

Design and development

Renovite works with state of the art frameworks as part of its product development using agile methodology and DevOps for end to end deployment and lifecycle management, it brings to the front these exact skills to help its Customers scale and build their bespoke solutions to complete and complement their payment ecosystem.

System Integration

Renovite's Systems Integration teams work with the client to deploy software into the client's infrastructure, complete end-to-end testing, and define application management processes to maintain the system for its lifetime

Managed Services

Renovite deploys a blended team of products and operations experts to ensure optimum performance of the application

Testing Services

Renovite offers a full range of Testing services and engagement models helping clients to benefit from its expert support
